CLAIM

What I claim as my invention is that I have invented this game playing surface where the **ratio** of the number of squares for the 6, 7, or 8 horses as compared to the 4, 5, 9, or 10 horses is **3:2.** This **ratio** incorporated with the laws of mathematical probability for the outcome of throwing 2 dice, along with a double move when doubles (Hardway) are thrown for the 4, 6, 8, or 10 horses; results in a unique and perfect playing surface.
